

Shared Review

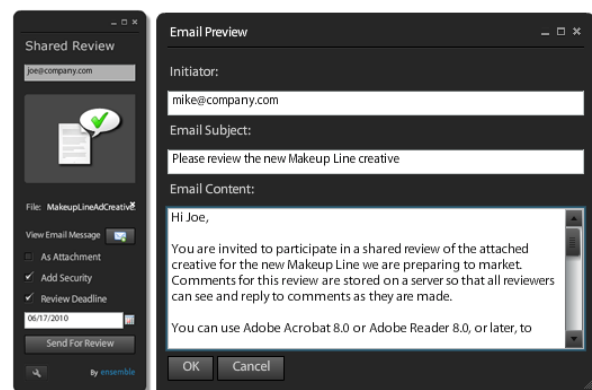

A robust tool for initiating and tracking ad-hoc reviews of electronic assets

Overview

Ensemble's Shared Review tool is a robust solution for initiating and tracking ad-hoc reviews of electronic assets. Reviewers can document feedback even when disconnected from the internet. Reviewer comments will sync-up with the server as soon as the connection is re-established, to retain the integrity of the original file while persisting comments on the assets. By simplifying the review process, Shared Review improves client service and streamlines the review process.

Some Key Features

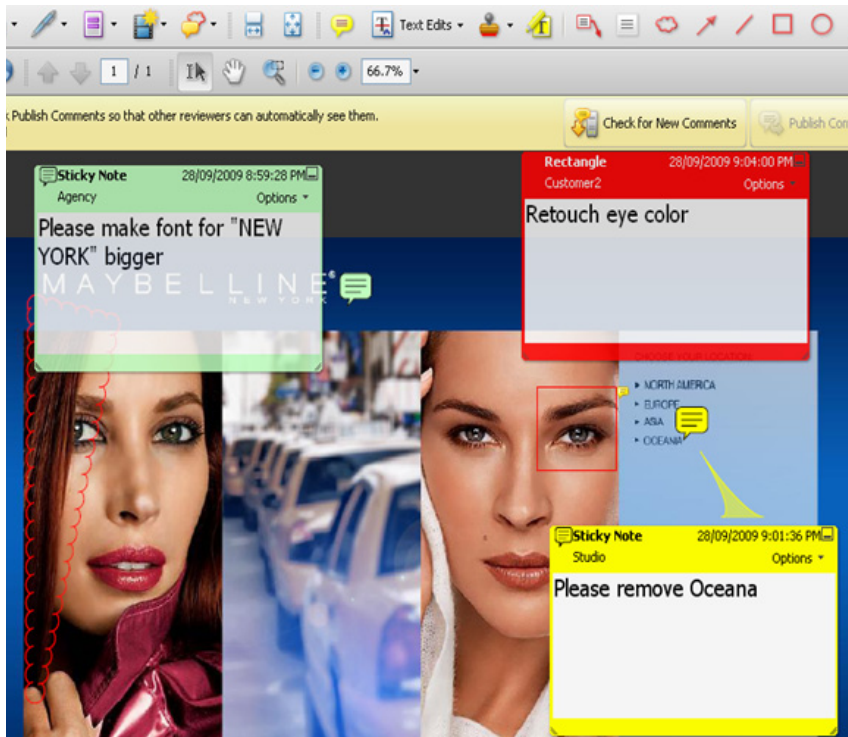

- Simple to use workflow to initiate a review process
- Ability to secure the review document internally and externally
- Easy to use commenting tools in Adobe® Reader
- Audit tracking of comments within the PDF
- Multiple users can review a PDF concurrently and add comments
- Automatic updates for new comments added to the PDF document
- Work online or offline and have comments synchronized next time you are online

Integrated Technologies

By leveraging Adobe® technologies, the Shared Review tool offers a wide range of services to its users:

- Adobe® AIR™ is the front-end client technology to kick-off the review process and assign user rights and document security. AIR communicates with LiveCycle via Flash remoting
- Adobe® LiveCycle® PDF Generator converts and assembles file assets from their native file type to PDF
- Adobe® LiveCycle® Reader Extensions enables the PDF asset for review and commenting using the free Adobe Reader
- Adobe® LiveCycle® Rights Management enables or restricts user rights on the PDF asset being collaborated on, depending on the audience
- Adobe® LiveCycle® Process Management supports a structured collaboration process with approvers and rejectors; enables customers to approve assets

Value Proposition

- Facilitate collaboration across teams and locations persisting comments on the asset being reviewed
- Improve client service and drive efficiency while directly assessing reviewers' comments with the correct version of the file
- Standardize the review process delivering any file format including 3D into one file type for exchange and consumption
- Immediate access to collaborators by providing feedback using free Adobe® Reader
- Simplify the review process by eliminating manual consolidation of comments from multiple reviewers

Benefits

Shared Review always gathers feedback on the correct version of the file to retain the integrity of the original file. The need to manually consolidate feedback from multiple reviewers is eliminated. The tool allows users to view and build on other reviewers' comments. Streamline the review process from asset production through client review and approval.
